Rohitash Kator

+919785787351 | rohitashkmwt@gmail.com | itsrkator | itsrkator | India

Summary

Backend-focused Full-Stack Engineer with 3+ years of experience designing and scaling microservices and API-driven platforms in production. Strong in JavaScript/TypeScript, Node.js (Express, Nest), Docker, Kubernetes, and cloud-native architectures on GCP and AWS. Delivered modern, user-friendly SPAs with React and Angular. Experience across FinTech, analytics platforms, and AI/LLM-powered document processing, with exposure to Python and Go in distributed systems. Known for owning features end-to-end, optimizing performance, and shipping secure, maintainable solutions with clear business impact. Google Cloud Certified Associate Cloud Engineer and Professional Data Engineer; GitHub Copilot Certified Professional.

Skills

Languages: *JavaScript, TypeScript, Python, Go, Java, C++*
Backend: *Node.js, Express.js, NestJS, Microservices, Gin, Flask*
Front-End: *React.js, Angular, HTML5/CSS3*
Databases: *PostgreSQL, MySQL, MongoDB, SQLite*
Cloud: *AWS, Google Cloud (GCP), Docker, Kubernetes (K8s)*
Concepts: *Data Structures & Algorithms, Object-Oriented Programming, System Design, Operating Systems*
Testing: *Unit & Integration Testing, Jest, Supertest*
Tools: *Git, GitHub, JIRA, VS Code, DBeaver, Postman*
Soft Skills: *Communication, Leadership, Teamwork, Problem Solving, Adaptability, Time Management*

Professional Experience

Software Engineer
Talentica Software
Nov. 2024 – Present
Pune, IN (Remote)

Julius Influencer Marketing & Campaign Platform (Client: Triller) | *JavaScript, TypeScript, Node.js, NestJS, Grind.js, Angular, MySQL, GraphQL, Redis, RabbitMQ, Elasticsearch, AWS, Phyllo API*

- Worked across a microservices-based influencer marketing platform enabling brands and agencies to discover influencers, manage campaigns, ingest content, and measure performance across Instagram, TikTok, and X (Twitter)..
- Contributed to multiple backend microservices focusing on campaign tracking, analytics accuracy, and system reliability.
- Designed and fixed campaign- and influencer status–driven tracking logic, ensuring active trackings were preserved during lifecycle transitions and analytics remained consistent across systems.
- Implemented Instagram Stories ingestion via Phyllo in a dedicated NestJS microservice, normalizing story media and metrics (reach, impressions) to replace brittle scrapers with a more reliable integration.
- Improved social data ingestion and collection tracking using CRON-based workflows and backfill logic, ensuring historical data was incorporated into reach and engagement graphs without double-counting.
- Enhanced a GraphQL-based reporting service for analytics and payouts, adding schema fields, improving deliverable traceability, and integrating Prometheus metrics for observability.
- Strengthened reliability and rollout safety using feature flags, safer defaults, tuned CRON schedules, and unit/integration testing, while resolving production issues related to data integrity.
- Contributed to frontend and admin experiences (Angular + legacy web) by aligning UI behavior with backend rules, adding warnings for risky operations, and ensuring marketer-visible metrics matched backend calculations.

Poll Management System (Internal) | *Node.js, Express.js, JavaScript/TypeScript, React, Angular, MongoDB, REST APIs, Mongoose, JWT, Helmet, Jest, Supertest*

- Designed and developed production-grade poll management system with dynamic questions, real-time report, and role-based access (Admin vs User).
- Built secure, scalable REST APIs using Node.js and Express.js for poll lifecycle management and voting workflows.
- Implemented JWT authentication with token blacklisting on logout; validated inputs with express-validator and enforced business rules (one submission per user per poll, required questions).
- Developed responsive user interfaces in both Angular and React (Vite), both consuming the same API (client-agnostic design); integrated analytics and visualisations (e.g. pie charts) for poll results.
- Applied security practices: Helmet, xss-clean, rate limiting, bcrypt password hashing; wrote unit tests with Jest and Supertest for auth and poll services.

Real-Time Chat Application (Internal) | *NestJS, JavaScript/TypeScript, Angular, PostgreSQL, Socket.IO, TypeORM, JWT, Google OAuth, bcrypt*

- Designed and developed full-stack real-time chat using NestJS and Angular: JWT (access + refresh) and Google OAuth; WebSockets (Socket.IO) for low-latency messaging; Slack-style rooms, membership, persistent messaging, delivery/read status, typing indicators, and in-app notifications.
- Designed PostgreSQL schema (users, rooms, memberships, messages, message_status, message_reactions, notifications) with TypeORM migrations and seed scripts; built Socket.IO gateway for room join/leave, real-time messaging, typing, presence, and message state sync; applied clean architecture and production-readiness (rate limiting, health checks, structured logging, automated tests).
- Developed responsive Angular SPA with lazy-loaded routes, route guards, central WebSocket service with typed events, and chat UI (room list, message list, typing indicator, message input) and profile/room management screens.

Employee Management System (Internal) | *Go, Gin, MongoDB, go-playground/validator, slog*

- Designed and developed Employee Management REST API in Go: CRUD, filtering, search, pagination; Clean/Hexagonal architecture with domain and use cases in the centre, HTTP (Gin) and MongoDB as pluggable adapters.
- Delivered business rules: validation (required fields, email format, salary range, status), email uniqueness, partial updates (PATCH); persistence with MongoDB (unique email index, compound index on department/status); production readiness: request timeouts, request ID middleware, structured JSON logging (slog), graceful shutdown, health endpoint (GET /healthz).

Event Booking API (Internal) | *Go, Gin, SQLite, JWT, bcrypt*

- Designed and developed REST API for event management and registration in Go: JWT authentication, bcrypt password hashing (cost 14), role-aware authorization (only event owners can update or delete events).
- Built layered architecture (routes, controllers, models, middlewares) with SQLite; user signup/login, event CRUD, event registration/cancellation via consistent JSON API; public vs. protected route groups and JWT middleware for stateless access control.

Software Engineer
Feb. 2024 – Nov. 2024

Eternalight Infotech — Pune, IN (Remote)

FamO Money – FinTech Platform (Client: FamO) | *JavaScript, TypeScript, Node.js, NestJS, React.js, PostgreSQL, TypeORM, Firebase*

- Contributed to the development of a FinTech platform that enables families to track investments across mutual funds, equities, bonds, real estate, gold, stocks, and private deals.
- Built backend features: family onboarding, deal digests, real-time discussions, messaging, push notifications; integrated real-time market data APIs for portfolio valuation, P&L, and investment insights; designed scalable database schemas and secure, high-performance APIs.
- Integrated real-time market data APIs to compute portfolio valuation, profit/loss, and actionable investment insights.
- Designed scalable database schemas and developed secure, high-performance APIs for financial operations.

Contract Note Parser (Client: FamO) | *Python, Flask, PostgreSQL, AWS Textract, OpenAI, LLMs*

- Designed and developed a document-processing service to parse broker contract notes and extract structured transaction data from PDFs.
- Implemented Python multi-threading and page chunking (processing PDFs in batches of 10 pages) to significantly improve throughput and reduce end-to-end processing time.
- Leveraged OCR and LLM-based extraction technologies to achieve more than 95% accuracy across varied document formats.
- Implemented validation workflows prior to database persistence, reducing manual data entry by more than 90% and improving operational efficiency.

Cloud Engineer
Jul. 2022 – Nov. 2023

SpringML Inc. — Hyderabad, IN (Remote)

Vehicle Crash Analytics Platform | *Node.js, Angular, Python, Flask, MySQL, Google Cloud*

- Built dynamic, filterable analytics tables with de-bounced search to enhance data exploration and usability.
- Implemented export-to-PDF functionality and delivered UI enhancements and bug fixes to improve reporting and user experience.

MGIC DocAI - Invoice Parser | *Angular, Python, Flask, Vertex AI, PostgreSQL*

- Designed and developed an AI-powered invoice parsing system to extract structured data from diverse invoice formats.
- Built a full-stack solution with an Angular front end and Flask backend, including pre-validation logic to ensure data quality before persistence.
- Streamlined document processing workflows, significantly reducing manual review efforts.

Cloud Infrastructure & Analytics

- Managed GCP IAM configurations to enforce least-privilege access and maintain security best practices.
- Built interactive dashboards using Looker and Looker Studio to deliver real-time insights to stakeholders.
- Supported scalability and performance optimization of cloud infrastructure across multiple projects.

Software Engineer (Internship)
Jan. 2022 – Mar. 2022

iLink Digital — Pune, IN (Remote)

- Developed RESTful APIs using Python, Flask, and Django for a data-driven analytics platform.
- Built real-time dashboards using Grafana integrated with PostgreSQL and Elasticsearch.

Software Developer(Internship)
May 2021 – Nov. 2021

Jivrus Technologies — Bangalore, IN (Remote)

- Developed a proctoring feature for online assessments, including camera tracking, screen monitoring, and secure media storage.
- Integrated Google Drive and Maps APIs to support scalable storage and geolocation features.

Education

National Institute of Technology (NIT), Andhra Pradesh
Aug. 2018 – Jun. 2022

Bachelor of Technology (B.Tech) in Computer Science and Engineering — Tadepalligudem, IN
